

HOW TO SET UP MEDICAL ID ON YOUR IPHONE

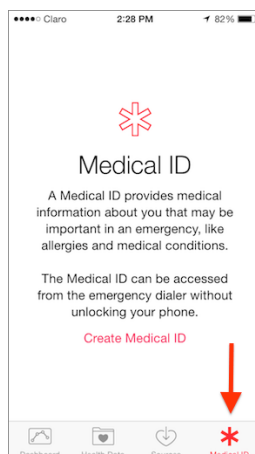

1. The latest update to IOS, now includes an app automatically called Health. You will need to find this icon on your phone.

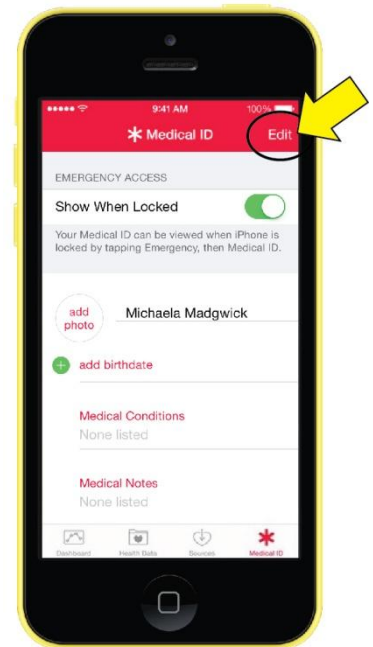

2. When you open this app, you will see your Dashboard

3. Click on the bottom right corner that says "Medical ID".

4. Click on the word "EDIT" on the top right corner. You can now enter data such as Date of Birth, Medical Conditions, Medications, Emergency Contact, etc. It is also very important that you keep the button open (green) at the top where it says "Show When Locked"

5. When you have finished entering your data, click on "Done" on the top right corner, and exit the application.

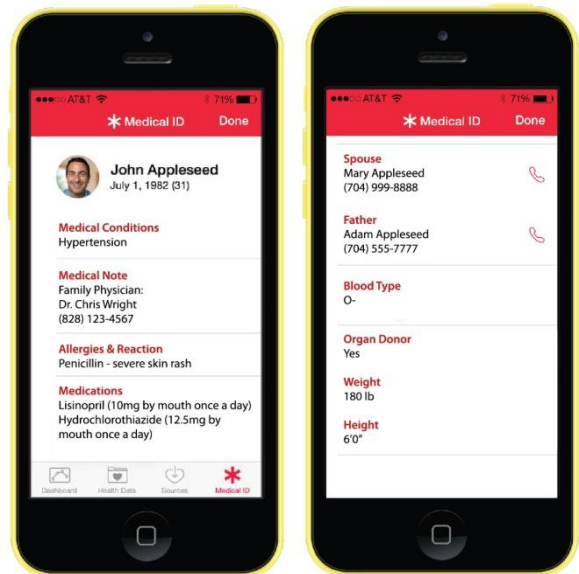

6. The best part is any Medical Responder or family member can access the Medical ID information even when an iPhone is locked. They just need to click on the word “Emergency” on the bottom left corner of the lock screen.

Once you click on it, the screen with the white background opens up.

Click on the work “Medical ID” on the bottom left corner, and the person’s Medical ID information shows up.

7. The only information that opens and is accessible to others, is the Medical ID page, not the rest of the information under the Health App such as the Dashboard and other Health Data.

8. If you need further assistance, please reference the YouTube video by [clicking here](#).
